

Comparative Study Of Creativity Of Rural And Urban Adolescent Boys And Girls Of District Aligarh

Dr. Kanchan Jain, Department of Education,

Sunrise University

Abstract

Creativity is a wonderful power of the human mind that gives birth to new concepts, ideas and products. It is an ability that enables a person to find solutions to problems in a noble way, create new knowledge and see the world from a new perspective. The development of creativity in students is important not only for their personal development but also for the development of society. Creativity is an integral part of human life. It not only makes a person unique but also plays an important role in the development of society. It is very important to develop creativity in students as it not only makes them a better person but also prepares them to face the challenges of the future.

Keywords - Creativity, Development, Ability, Society

“Creative people innovate.” _Dr.Kanchan Jain

Introduction

Students are the future of a country. It should be our priority to enhance the talent hidden in them. Creativity is an important aspect of this talent. It not only makes students a better human being but also contributes to the development of society and the country. Creativity means giving birth to new ideas, finding unique solutions to problems and using your imagination. This is an ability that every person has, it just needs to be enhanced. Many methods can be adopted to promote creativity in students.

Change in teaching method: Emphasis should be on understanding rather than rote learning. Students should be encouraged to ask questions and give their opinions.

Organizing creative activities: Activities like painting, music, drama, poetry etc. To promote creativity of students.

Encouraging libraries: Libraries are a treasure of knowledge for students. Here they can increase their imagination by reading books on various subjects.

Organizing competitions: Competitions like essay writing, debate, science exhibition etc. give students a chance to show their talent.

Creativity is very important not only for students but also for society. Creative people innovate, develop new technologies and find solutions to the problems of society.

Objectives of the research

1. To study the creativity level of adolescent students of rural and urban schools.
2. To study the significant correlation between the vocational interest and creativity level of adolescent students.

Research Hypotheses

1. There will be no significant difference in the creativity level of adolescent students of rural and urban schools.
2. A significant correlation will be found between the vocational interest and creativity level of adolescent students.

Research Method

General survey method has been used for the research study.

Population and Sample

In the present research, the group of students of class 12th is the population. 35 rural and 35 urban students, a total of 70 students were selected from district Aligarh as sample by 'Purposeful Random Sampling Method'.

Research Variables

- 1. Independent Variable** - Creativity
- 2. Dependent Variable** - Adolescent Students.

Research Instruments

The following instruments have been used for the present research:

Creativity Scale - Dr. B. K. Passi, Professor and Head, Devi Ahilya University, Indore.

Importance of Creativity in students

Problem Solving: Creative students take problems as a challenge and find new and unique ways to solve them. They adopt new approaches by breaking away from conventional thinking.

Innovation: Creativity is the mother of innovation. Creative students develop new ideas and products that can be useful to society.

Interest in Studies: Creative activities help students take more interest in studies. When students are free to understand and work on a subject in their own way, they become more curious about that subject.

Confidence: Creativity increases confidence in students. When students create something new using their creative abilities, they get a sense of accomplishment which increases their confidence.

Contribution to Society: Creative students make positive contributions to society. They help move society forward with new ideas and products.

Measures to Promote Creativity in Students

Additional Suggestions: You can cite various studies and research papers to make the presented research more comprehensive.

- ❖ You can describe various creativity development models and techniques.
- ❖ You can also discuss various ways of measuring creativity in students.

Essentials of Creativity

Generation of New Ideas: Creativity gives rise to new thinking and new ideas. It motivates students to find solutions to problems and encourages them to adopt new approaches.

Problem Solving: Creativity helps students to solve problems. They can find solutions to different situations by thinking creatively.

Increase in self-confidence: Creativity increases the self-confidence of students. When they express their ideas and are appreciated, their self-confidence increases.

Adaptability: Creative students are more adaptable to changes. They adapt easily to new situations and take advantage of new opportunities.

Development of Creativity in Students

Creative Environment: An environment should be created in schools where students can express their ideas freely. Teachers should encourage students to come up with new ideas.

Creative Activities: Various types of creative activities should be organized in schools such as painting, music, drama, etc.

Open-ended Questioning: Teachers should ask open-ended questions to students so that they can express their ideas.

Group Work: Through group work, students exchange ideas with each other and develop new ideas.

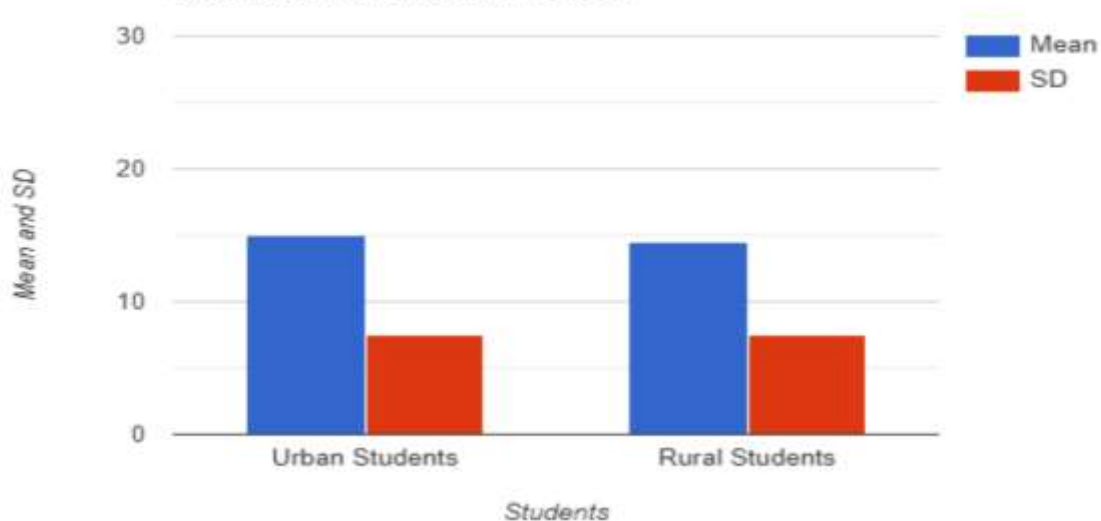

Encourage Reading: Reading develops the imagination power of students and they can generate new ideas.

Analysis and Conclusion

Table No. - 1. There is no significant difference in the creativity level of adolescent students of rural and urban schools of Aligarh District.

Creativity Level	N	Mean	SD	Table value At 0.05 level of significance	Table value At 0.01 level of significance	Degree of Freedom	t' Value	Result
Urban School Adolescents of students	35	15	7.5	2.00	2.65	35+35-2 = 68	1.95	Accepted
Rural School Adolescents of students	35	14.5						

Table 1- A bar graph to show the creativity level of adolescent students of rural and urban schools

Interpretation -

It is clear from the above table that whether the students of Aligarh district are from rural area or urban area, there is no significant effect of area or environment on their mentality. The border of rural schools are attached to urban areas. Also, the affected area of communication media has increased from before, hence the difference in creativity is not visible. But it is clear on the basis of the mean. The creative ability of students studying in rural schools of district Aligarh is high. Every adolescent boy seems serious about his future today. Wherever he studies, he thinks of giving color to his imagination and also works accordingly. As a result, H1 is accepted.

Table No. - 2. There will be a significant correlation between the vocational interest and creativity level of adolescent students rural and urban schools of Aligarh District.

Creativity	N	Degree of Freedom	t' Value	HO Accepted / Rejected	Correlation
Professional Interest	35	$35+35-2 = 68$		Accepted	Correlation is positive

Creativity Level	35		1.96		
------------------	-----------	--	-------------	--	--

Interpretation

It is clear from the above table that there is a significant positive correlation between creativity and vocational interest. However, the level of correlation is not high. The creative correlation confirms that the creativity of the student affects the vocational interest. The thinking and ideas of a creative student are more likely to be of a high level from the vocational point of view.

Suggestion

Although, the testing of the research hypotheses did not reflect any special difference in the creativity and vocational interest of the students on the basis of area. A positive correlation was found between creativity and vocational interest, but its level is normal. It is clear that there is a need to increase the level of creativity. Along with this, vocational education should also be given along with general education to change their thinking towards vocation. The schools where such education is being given should have proper resources. Teachers should identify the creativity of students through various activities and try to develop it. Teachers should be sensitive towards students and should treat them with patience and advise them to choose the right career.

Conclusion

Creativity is very important for the all-round development of students. It makes them a better person and prepares them to face the challenges of the future. Schools and parents should jointly make efforts to develop creativity in students. Development of creativity in students is an important goal. Creativity not only helps students to develop personally but also contributes to the development of society. Schools, parents and teachers should jointly make efforts to promote creativity in students. Promoting creativity in students is a challenging task but it is not impossible. If we make the right efforts, we can enhance the hidden talent in students and give them a better future.
